

Energy Policy

Farrans (Construction) Ltd are committed to ongoing improvements to environmental management. We formally set out below our intentions to make more efficient use of energy and reduce our Carbon Dioxide emissions. This policy covers all energy used at all locations, including fuel for mobile plant and off-site road haulage.

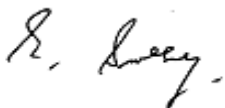

As a company, we are committed to:-

- a) increasing our energy efficiency in line with Best Practice
- b) actively managing our procurement and consumption of energy
- c) reducing the environmental impact arising from our consumption of energy
- d) investing in appropriate, clean, energy technology

To achieve this we will:-

- develop an energy management strategy for the company and review annually
- annually set and review energy management objectives
- implement an appropriate system for the measurement of energy performance
- regularly report on energy performance
- designate named individual(s) as having responsibility for energy efficiency
- provide appropriate information and training on energy efficiency to all employees
- actively seek new opportunities of improving energy efficiency as part of the overall continuous improvement of our business
- consider and implement technologies used elsewhere in the CRH plc Group

It is recognised that emissions to the environment have contributed to the problems of global warming, acid rain, and general health problems due to ozone depletion and air pollution. We all must play our part in promoting energy efficiency and reducing our Carbon Dioxide emissions.
